

INDIE HOPS STRATA® HYPERBOOST®

STRATA® HYPERBOOST® SPECS

Post Boil/Whirlpool - <i>Recommended Sub for T90</i>			50:1
Knock Out/Dry Hop - <i>Recommended Sub for T90</i>			100:1
Alpha Acids	15 - 40%	Total Oils	> 40%

THE INDIE HOPS STRATA® LINEUP		PACK SIZE	PRICE
Indie Hops Strata®	Strata® Hyperboost™	100ml Bottle	£295/pack
Indie Hops Strata®	T90 Pellets	5kg & 10kg	from £25.95/kg
Indie Hops Strata®	CGX® Cryogenic Lupulin Pellets	5kg	from £62.95/kg

Indie Hops Strata® HyperBoost® is a **concentrated hop oil extract** with minimal alpha and beta acid content, produced by Yakima Chief Hops using an innovative CO₂ extraction method.

Use Strata® Hyperboost® in **whirlpool, knock-out, and dry-hopping** - with **best results in cold-side applications**. Combine Indie Hops Strata® Hyperboost® with **Indie Hops Strata® T90 Pellets** to improve efficiency and increase survivable hop oils.

KEY BENEFITS OF STRATA® HYPERBOOST®

- Increased efficiency
- Ease of use
- Increased aroma
- Less storage space needed
- High concentrations of survivable compounds
- Reduction of waste

WHAT IS THE DIFFERENCE BETWEEN HYPERBOOST® & DYNABOOST®?

HyperBoost® and DynaBoost® are both concentrated hop oil products, created using CO₂ extraction. DynaBoost® is a whirlpool supplement, while HyperBoost® has been formulated as a suggested cold side addition.

Both contain high concentrations of hop oil:

DynaBoost® is standardized at 20% hop oil,

HyperBoost® ranges from 40-70% oil depending on the variety.

DynaBoost® is pourable at room temperature, while HyperBoost remains flowable even below freezing temperatures, making it easy to disperse in the fermenter.

DOES HYPERBOOST® CONTAIN ALPHA ACID?

HyperBoost® contains moderate quantities of alpha acid, typically ranging from 15-40%. The alpha acid should have a negligible effect in cold-side usage scenarios, and bitterness contributions can be easily calculated for hot-side use.

HOW TO BREW WITH STRATA® HYPERBOOST®

Indie Hops Strata® Hyperboost® has stable, low-temperature flowability which allows for easy application during cold-side brewing, including knockout and dry hopping.

Strata® HyperBoost® is formulated for straightforward dosing during cold-side fermentation, delivering a high level of hop character in the finished beer. It may also be used in the whirlpool. Substituting HyperBoost® for Indie Hops Strata® T90 Pellets can help improve overall beer yield.

Strata® HyperBoost® is designed to easily pour into the fermenter as a cold side addition, adding an intense saturation of hop flavour to your finished beer. Most brewers choose to use HyperBoost™ as a fermenter addition, but it can also be added to the whirlpool.

Strata® Hyperboost® is **not suitable for kettle additions**. For early kettle additions and bittering application, use **Indie Hops Strata® T90 Pellets**.

USING STRATA® HYPERBOOST®: POST BOIL/WHIRLPOOL ADDITIONS

When used in the whirlpool, HyperBoost™ can substitute for pellet hops at levels of up to 100%.

A starting guideline is to **replace T90 pellet additions at a rate of 50:1, with 20g of Strata® HyperBoost® in place of 1 kg of T90 pellets**. Final usage rates may be adjusted based on beer style and desired hop expression.

USING STRATA® HYPERBOOST®: KNOCK OUT/DRY HOP

Trials indicate that the best place to add HyperBoost® is at the start of fermentation. Dosing during knockout or the first two days of fermentation ensures the HyperBoost® is well incorporated into the beer, and that the survivable compounds are fully dissolved.

The initial recommendation is you should start by replacing 25-50% of the T90 dose with Hyperboost®, to get a sense of how the flavours express in your beer.

Indie Hops recommends a replacement rate of 100:1 HyperBoost® to T90 pellets by weight (ie 10 g HyperBoost® in place of 1 kg T90).

INDIE HOPS ON STRATA® HYPERBOOST®

Jim Solberg, Indie Hops Co-founder & CEO:

Collaboration is a big deal between craft brewers and can be a good thing between hop suppliers as well. We're stoked to be collaborating with YCH to pair our standout variety Strata with their exciting new cold-side flowable HyperBoost®. It's good for us, good for YCH, and great for brewers!"

"There is a dizzying number of hop oil extracts in the market now. One key factor that attracted us to YCH HyperBoost® for our variety Strata® is that HyperBoost® is derived solely from hops. Real hops grown by real people for brewers to excite customers who really like hoppy beer."
